

Inft2012 Application Programming – Notes for week 9

No lab exercises

This week's lecture is really about how to develop a program, and you should be considering how to apply its lessons to your assignment. Therefore there are no exercises specific to the lecture.

Even so, you should explore and experiment with the programming ideas presented in the lecture, such as iterating through all the controls in a group box, and having a single event handler for multiple controls. Even if they don't prove useful for your assignment, they might be useful in your future programming.
